

At page 10, line 9 and lines 12-13:

A15 A still supplementary aspect of the present invention is an information aggregate characterized by programs and/or data for activating all or part of functions of all or part of means of said receiving control device on a computer.

CLAIMS:

Please replace claims 4-5, 7, 9 and 11-15 as follows:

A16 1 4. (Amended) A receiving control device in accordance with
2 any one of claims 1 to 2, wherein said retrieval means retrieves program
3 information to obtain a program relating to said keyword.

A16 1 5. (Amended) A receiving control device in accordance with any one
2 of claims 1 to 2, wherein

A16 3 said retrieval means transmits said keyword input via a network to a
4 program information server connected to said network,

A16 5 said program information server stores program information, and
6 retrieves program information of a program relating to said keyword from said
7 stored program information by using said transmitted keyword, and

A16 8 said retrieval means obtains said program information retrieved by
9 said program information server.

A17 1 7. (Amended) A receiving control device in accordance with
2 claim 5, wherein said keyword input means inputs said keywords from a keyword
3 server connected to said network and used to transmit said keywords.

A18 1 9. (Amended) A receiving control device in accordance with
2 claim 5, further comprising program information change monitoring means for
3 carrying out monitoring as to whether program information stored in said program
4 information server is renewed or not, wherein

A18 Cn. T 5 when said program information change monitoring means detects
6 that the program information stored in said program information server is renewed

A18
7 after the time when said retrieval means last obtained program information of a
8 program relating to said keyword,

9 said retrieval means renews said obtained program information on
10 the basis of the result of said detection.

1 11. (Amended) A receiving control device in accordance with
2 claim 5, further comprising an area information holding means of holding area
3 information for specifying an area wherein said receiving control device itself is
4 installed, wherein

5 when transmitting said input keywords to said program information
6 server, said retrieval means also transmits said area information to said program
7 information server, and

A19
8 said program information server carries out retrieval in consideration
9 of said transmitted area information.

1 12. (Amended) A receiving control device in accordance with
2 any one of claims 1 to 2, further comprising a program information display means
3 of displaying program information, wherein

4 said program information display means displays said program
5 information in a table format including at least said keywords or said remote
6 controller channel numbers corresponding to said keywords, time information,
7 program titles,

8 one of the ordinate and the abscissa of said format represents said
9 keywords or said remote controller channel numbers corresponding to said
10 keywords, and the other represents time information.

1 13. (Amended) A receiving control device in accordance with
2 claim 7, wherein said program information server has the function of said keyword
3 server.

1 14. (Amended) A medium having programs and/or data for
2 activating all or part of functions of all or part of means of said receiving control
3 device in accordance with any one of claims 1 to 2 on a computer, wherein said
4 medium can be processed by a computer.

A19
1 15. (Amended) An information aggregate characterized by
2 programs and/or data for activating all or part of functions of all or part of means
3 of said receiving control device in accordance with any one of claims 1 to 2 on a
4 computer.
